EDUCATION

San Jose State University

Master of Science – Software Engineering

San Jose, CA

May 2026

Ramdeobaba University

Bachelors of Engineering - Information Technology

Nagpur, MH

May 2022

TECHNICAL SKILLS

Languages: Python, R, Java, C/C++, JavaScript, Go (Golang), SQL, NoSQL

Frameworks: React, Next, Node.js, Flask, Express, FastAPI, WordPress, Material-UI, REST, Apache Airflow

Developer Tools: Git, Docker, Firebase, Google Cloud Platform, MongoDB, Kafka, RabbitMQ, Tableau, PowerBI

Libraries: PyTorch, TensorFlow, Matplotlib, Pandas, NumPy, OpenCV, Scikit-Learn, Keras

Big Data Technologies Spark, Big Data, Hadoop, HDFS, Hive

EXPERIENCE

Software Development Engineer Intern

Amazon Inc.

May 2025 – Aug 2025

Bellevue, WA

- Migrated top 3 AWS Step Functions to Apache Airflow DAGs, engineering custom task operators and DAG factory patterns for nested state machine orchestration, improving workflow monitoring execution visibility by 35%.
- Architected an Operational Excellence metrics aggregation pipeline consolidating runtime telemetry, failure rates, idle time, manual intervention signals, reducing on-call resolution time by 60% and enhancing policy scaling.
- Engineered an automated Airflow DAG with idempotent task logic and retry orchestration pipelines for site overrides and repeats, cutting on-call effort by 80% and improving policy selection quality by 27% across stores.

Software Development Engineer

Cognizant Technology Solutions

Jan 2022 – Jul 2024

Pune, MH

- Engineered 50+ data processing pipelines on Informatica Intelligent Cloud Services (IICS), implementing custom Java-based transformation functions, data parsing logic, and real-time processing modules to handle complex data flow orchestration.
- Architected the migration of 40+ components from Informatica PowerCenter to IICS, reengineering critical ETL workflows in Java to optimize cloud and pipeline performance, ensuring zero-loss data across environments.
- Designed and optimized backend data retrieval systems integrating AWS S3 and Snowflake, engineering advanced SQL query layers that reduced data retrieval latency by 30% across production pipelines.

PROJECTS

ConfigFlow-Configuration Management System | *Zookeeper, Kafka, AWS, Docker, Redis* Aug 2025 - May 2026

- Architected a real-time centralized configuration management system for microservices, implementing a hierarchical inheritance model with regional and service-level overrides — enabling restart-free, zero-downtime updates across distributed environments at scale.
- Engineered a workflow-driven configuration governance pipeline with version control, automated validation, staged rollouts, and rollback mechanisms — minimizing downtime and misconfiguration risk across large-scale microservice environments.

Enterprise AI Copilot | *LangChain, OpenAI GPT-4, FastAPI, AWS (EC2/S3), Docker* Jan 2025 - May 2025

- Architected an Enterprise AI Copilot platform integrating multiple LLM-powered agentic services (tax agent, OCR analyzer, salary calculator, conversational AI) using LangChain and REST APIs — adopted by 1,000+ users, reducing cross-tool switching by 30%.

Tiny16 Software CPU | *C++17, x86 Assembly, GCC Toolchain, MMIO, CMake* Aug 2025 - Dec 2025

- Engineered a fully functional 16-bit software CPU in C++ from scratch, implementing a custom ISA, two-pass assembler, ALU, MMIO (UART + Timer), and emulator executing recursive assembly programs (factorial, fibonacci) with full stack-frame and memory layout simulation.
