EDUCATION

San Jose State University

Master of Science – Software Engineering [GPA - 3.8/4]

San Jose, CA

Aug 2024 - May 2026

Ramdeobaba University

Bachelors of Engineering - Information Technology

Nagpur, MH

Aug 2018 - May 2022

TECHNICAL SKILLS

Languages: Python, R, Java, C/C++, JavaScript, Go (Golang), SQL, NoSQL

Distributed Systems & Infrastructure: Kafka, Apache Airflow, Docker, Redis, RabbitMQ, ZooKeeper

Machine Learning: PyTorch, TensorFlow, Scikit-learn, OpenCV, LangChain

Cloud & Databases: AWS, GCP, MongoDB, Snowflake, Git

Frameworks: React, Node.js, Flask, FastAPI, Express

Data & Big Data: Spark, Hadoop, Hive, HDFS

EXPERIENCE

Software Development Engineer Intern

Amazon Inc.

May 2025 – Aug 2025

Bellevue, WA

- Re-architected distributed workflow orchestration by migrating AWS Step Functions to Apache Airflow DAG pipelines, improving observability and execution monitoring across production workflows by 35%.
- Built a distributed telemetry aggregation pipeline processing workflow runtime metrics, failure rates, and operational signals, reducing on-call resolution time by 60%.
- Designed fault-tolerant Airflow DAG pipelines with idempotent task execution and retry orchestration, reducing manual intervention by 80% and improving policy decision quality by 27%.

Software Development Engineer

Cognizant Technology Solutions

Jan 2022 – Jul 2024

Pune, MH

- Developed 50+ large-scale data processing pipelines using Java and cloud-based ETL infrastructure, supporting high-volume enterprise data ingestion and transformation workflows.
- Architected the migration of 40+ components from Informatica PowerCenter to IICS, re-engineering critical ETL workflows in Java to optimize cloud and pipeline performance, ensuring zero-loss data across environments.
- Designed backend data retrieval services integrating AWS S3 and Snowflake, optimizing distributed query performance and reducing data retrieval latency by 30%.

PROJECTS

ConfigFlow-Configuration Management System | Zookeeper, Kafka, AWS, Docker, Redis Aug 2025 - May 2026

- Built a distributed configuration management system for microservices using Kafka and Zookeeper, enabling real-time, restart-free configuration propagation with hierarchical regional and service-level overrides — supporting zero-downtime updates at scale.
- Engineered a configuration governance pipeline with version-controlled rollouts, automated schema validation, staged deployment, and one-click rollback — enabling zero-downtime configuration updates across large-scale microservice environments without service restarts.

Enterprise AI Copilot | LangChain, OpenAI GPT-4, FastAPI, AWS (EC2/S3), Docker Jan 2025 - May 2025

- Developed an AI Copilot platform using LangChain and GPT-4 integrating multiple autonomous agents (OCR, tax analysis, salary computation, conversational assistant) used by 1,000+ users. Designed scalable API services using FastAPI and Docker for LLM-powered inference workflows.

Tiny16 Software CPU | C++17, x86 Assembly, GCC Toolchain, MMIO, CMake Aug 2025 - Dec 2025

- Designed and implemented a 16-bit software CPU emulator in C++17, including a custom ISA, two-pass assembler, ALU, UART/Timer MMIO, and full execution engine — capable of running recursive assembly programs (factorial, Fibonacci) with accurate stack-frame layout and memory simulation.
